

Renta

Know who has paid and who is late.

A property & rent manager for landlords: properties, tenants, rent due dates, payment records and overdue reminders.

User guide

Technical documentation

5-minute demo script

Built with Next.js · TypeScript · Drizzle ORM · PostgreSQL · deployed on Railway

What's inside

1. **Overview:** the problem, the solution and the features
2. **How rent is calculated:** due dates, statuses, arrears and reminders
3. **Architecture:** stack, folder structure and data model
4. **Walkthrough:** every screen, with numbered annotations
5. **Mobile:** the Bolt-style bottom tab bar
6. **Running locally:** setup commands and the demo account
7. **Testing:** unit, integration and end-to-end suites
8. **Deployment:** Railway and PostgreSQL
9. **5-minute presentation script**

1 • Overview

Small landlords often track rent in notebooks, WhatsApp chats and memory. They forget who has paid, miss due dates and feel awkward chasing late tenants. **Renta** puts every property, tenant and payment in one place, works out who owes what automatically, and writes the polite reminder for you.

Properties

Buildings with units, type, address and occupancy.

Tenants

Contact details, unit, monthly rent, due day and lease dates.

Rent due dates

A monthly rent roll showing every due date and status.

Payment records

Full and part payments, linked to a rent month, with receipts.

Overdue reminders

Personalised messages by WhatsApp, SMS or email, with history.

Dashboard

Collection rate, arrears, 6-month chart, CSV export.

Design

The look is based on the **Bolt** app: bright green (#34D186) for main actions, near-black text, soft white cards with large rounded corners, pill-shaped buttons and a bottom tab bar on mobile. The logo combines a roof and the letter "R". Icons come from **Lucide**, tenant avatars are generated with **DiceBear** (Personas), and the property images are custom SVG illustrations that ship with the app.

2 · How rent is calculated

All rent maths lives in one pure module, `src/lib/rent.ts` , which never touches the database. That makes it easy to unit test and easy to explain.

Rent periods & due dates

Rent is charged per **period** (a calendar month, `YYYY-MM`). For each tenant, Renta creates one period for every month from the lease start up to today, or up to the lease end if that comes first. Each period's due date is the tenant's **due day** in that month (for example, the 5th → `2026-10-05`).

Status of a month

STATUS	RULE	EXAMPLE (RENT ₦100K, DUE 5 OCT)
Paid	Payments for the month ≥ rent	₦100k recorded for October
Upcoming	Nothing paid and the due date hasn't passed	Today is 2 Oct, nothing paid
Part-paid	Some paid, balance left, not yet past due	₦40k paid on 1 Oct
Overdue	A balance is left <i>after</i> the due date	Today is 6 Oct, ₦60k still owed

Arrears is the total of the balances on every overdue month. A tenant who missed September and October owes both, and the reminder quotes the full amount and the oldest month.

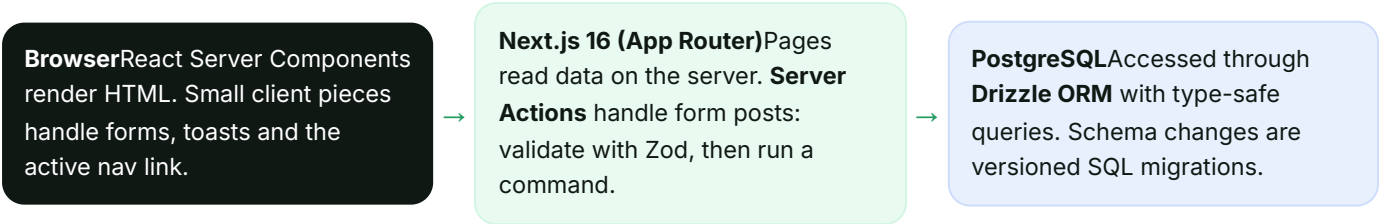

Business rules

- A payment always belongs to a tenant *and* a rent month. One month can have several payments (part-payments).
- You can't record more than the balance left for a month, so "₦500,000 for a ₦450,000 month" is rejected.
- Reminders can only be sent to tenants with overdue rent. Each one is saved with its message, channel and the amount due.
- Marking a tenant *Moved out* with an end date takes them out of the rent roll and reminders from the following month.
- Every query is limited to the signed-in landlord, so one landlord can never see or change another's data.

Reminder message (generated)

Hi Emeka, this is a friendly reminder that your rent of ₦1,500,000 for September 2026 at Maitama Court (Wing B) is now 41 days overdue. Please make payment at your earliest convenience and share the receipt once done. Thank you. Adaeze Okafor (sent via Renta)

3 · Architecture

LAYER	FILES	RESPONSIBILITY
Schema	src/db/schema.ts , drizzle/	Tables, enums, relations, generated SQL migrations
Domain logic	src/lib/rent.ts	Pure rent maths: periods, statuses, ledger, arrears, reminder text
Validation	src/lib/validation.ts	Zod schemas for every form, returning field-level errors
Queries	src/services/portfolio.ts	Load a landlord's portfolio; rent roll, overdue list, dashboard stats
Commands	src/services/commands.ts	Create/update/delete with ownership checks; payments; reminders
Web	src/app/** , src/components/**	Pages, server actions, API routes (/api/health , /api/summary , /api/payments.csv)
Auth	src/lib/session.ts	Signed JWT (jose) in an HTTP-only cookie; passwords hashed with bcrypt

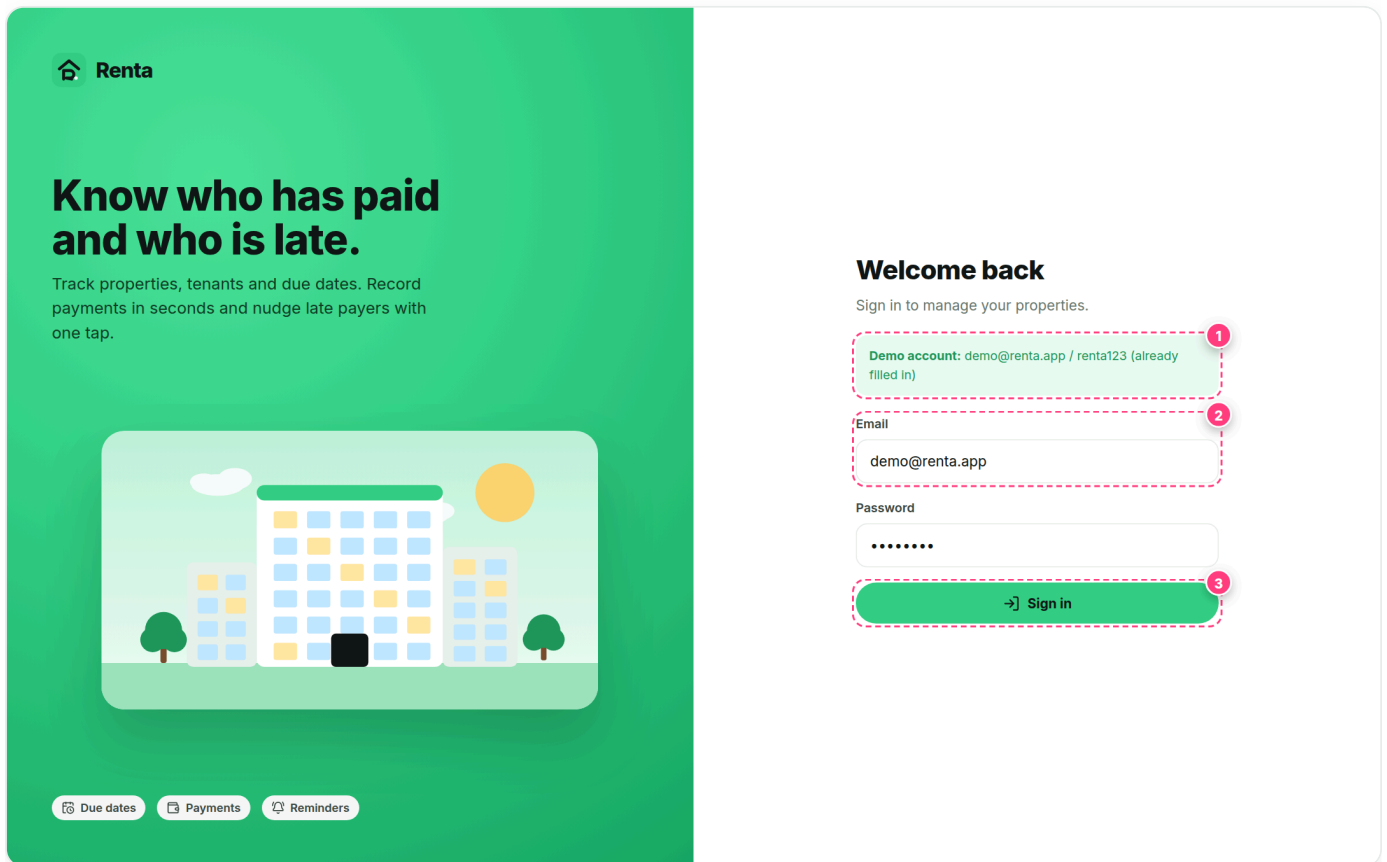

Data model

TABLE	KEY COLUMNS	RELATIONSHIPS
landlords	name, email (unique), password_hash	has many properties
properties	name, address, city, type (enum), units, image	belongs to landlord · has many tenants
tenants	full_name, email, phone, unit_label, rent_amount, due_day, lease_start, lease_end, status	belongs to property · has many payments & reminders
payments	amount, period (YYYY-MM), paid_on, method (enum), reference	belongs to tenant
reminders	period, channel (enum), message, amount_due, sent_at	belongs to tenant

Foreign keys use `ON DELETE CASCADE` , so deleting a property also removes its tenants, payments and reminders. Money is stored as whole Naira (integers) to avoid floating-point rounding.

Sign in </login>

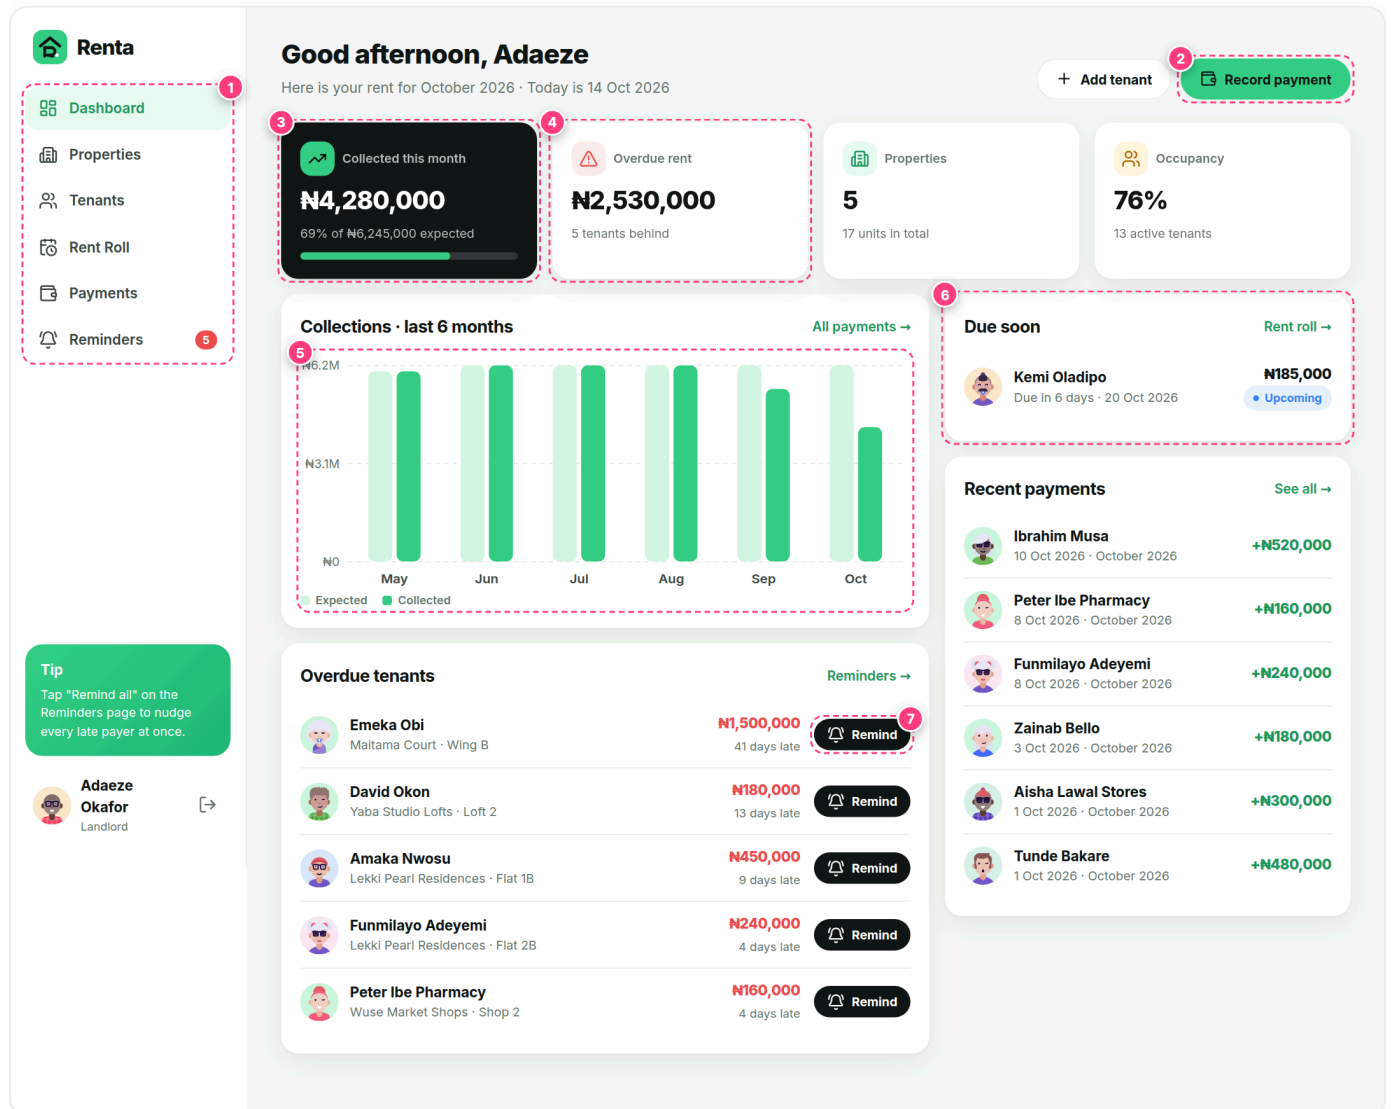

Every page is private to the signed-in landlord. Sessions are stored in a signed, HTTP-only cookie that lasts 7 days.

- 1** Demo credentials are shown here and pre-filled, so a presenter can sign in with one click.
- 2** Email and password fields. Wrong details show "Incorrect email or password" without revealing which one was wrong.
- 3** Sign in takes you to the dashboard.

Dashboard /

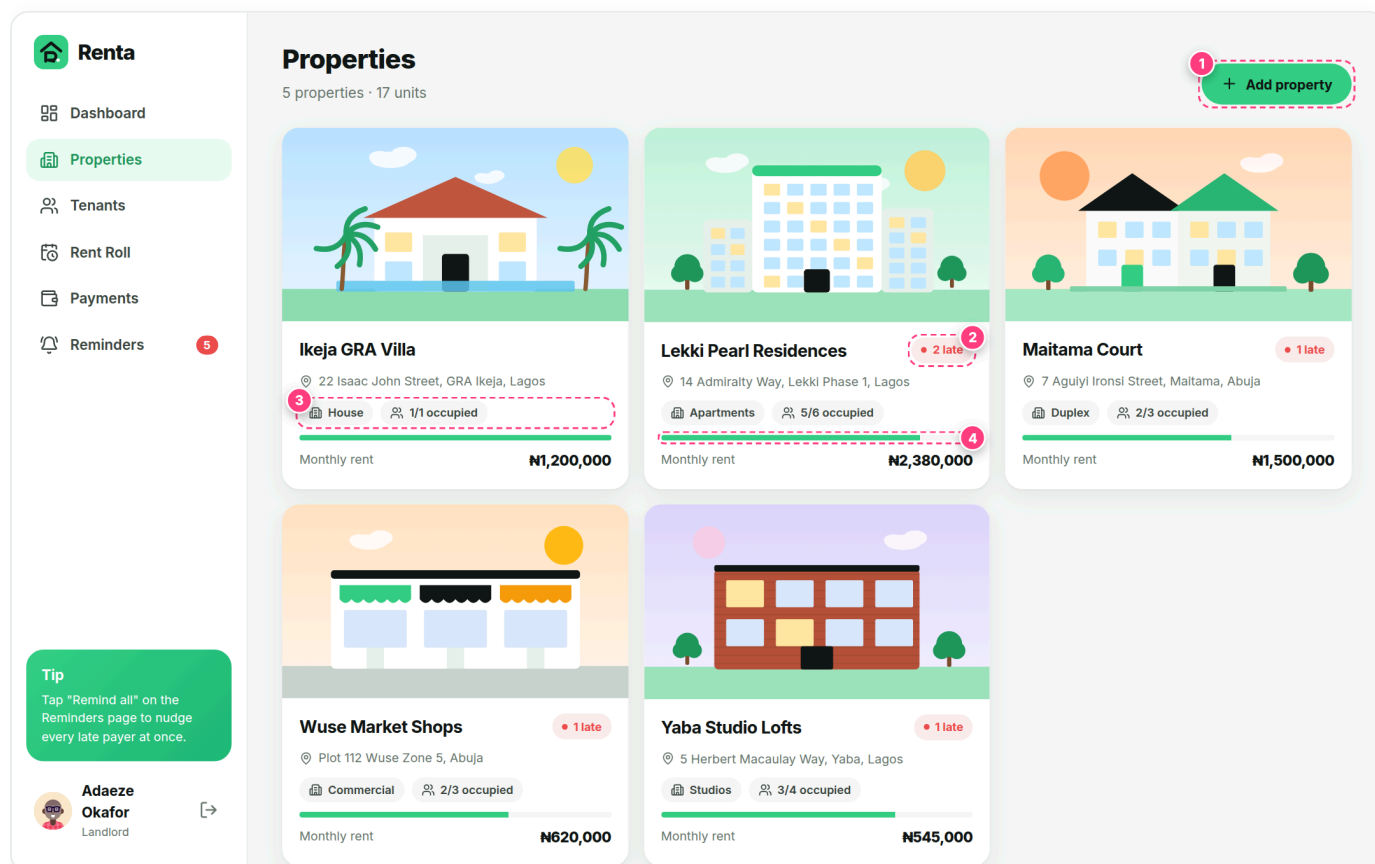

The home screen answers the landlord's three daily questions: how much came in, who is late, and what is due next.

- 1 Main navigation. The red badge on Reminders counts tenants who are overdue right now.
- 2 Record payment: the most common action, always one tap away.
- 3 Collected this month against expected rent, with a progress bar.
- 4 Total overdue rent across all tenants and months.
- 5 Six-month chart of expected (light) vs collected (green) rent.
- 6 Due soon: unpaid rent due in the next 10 days.
- 7 Overdue tenants, oldest debt first, each with a one-tap Remind button.

Properties /properties

Each property shows as a card with a cover illustration, its occupancy and the rent it brings in each month.

- 1 Add a new property.
- 2 Red badge: how many tenants in this property are late.
- 3 Property type and occupied units (active tenants / units).
- 4 Occupancy bar and total monthly rent for the property.

How to

1. Click Add property.
2. Fill in name, address, city, units and type, then pick a cover.
3. Click Add property. You land on the new property's page and see a confirmation toast.

Property details /properties/:id

Shows one building and everyone living in it.

WHATSAPP · 8 Sep 2026 · ₦750,000

Hi Emeka, this is a friendly reminder that your rent for last month at Maitama Court (Wing B) is overdue. Thank you. Adaeze Okafor (sent via Renta)

Remove tenant

- 1

Month strip: each month coloured by status (green paid, red overdue, amber part-paid, blue upcoming).
- 2

Ledger: due date, amount paid and balance for each month.
- 3

Key facts: rent, due day, lease dates, total paid and arrears.
- 4

Choose WhatsApp, SMS or Email and send an overdue reminder.
- 5

Reminder history with the exact message that was sent.

Add tenant </tenants/new>

A tenant belongs to a property and has a monthly rent and a due day. These two values drive every rent calculation.

Record a payment

Log rent received by transfer, POS, cash or card.

Tenant
Amaka Nwosu (Lekki Pearl Residences, Flat 1B)

Amount (N)
500000
Only N450,000 is outstanding for October 2026

Rent month
October 2026

Date paid
10/14/2026

Method
Bank transfer

Reference (optional)
e.g. TRF-20261005

Record payment

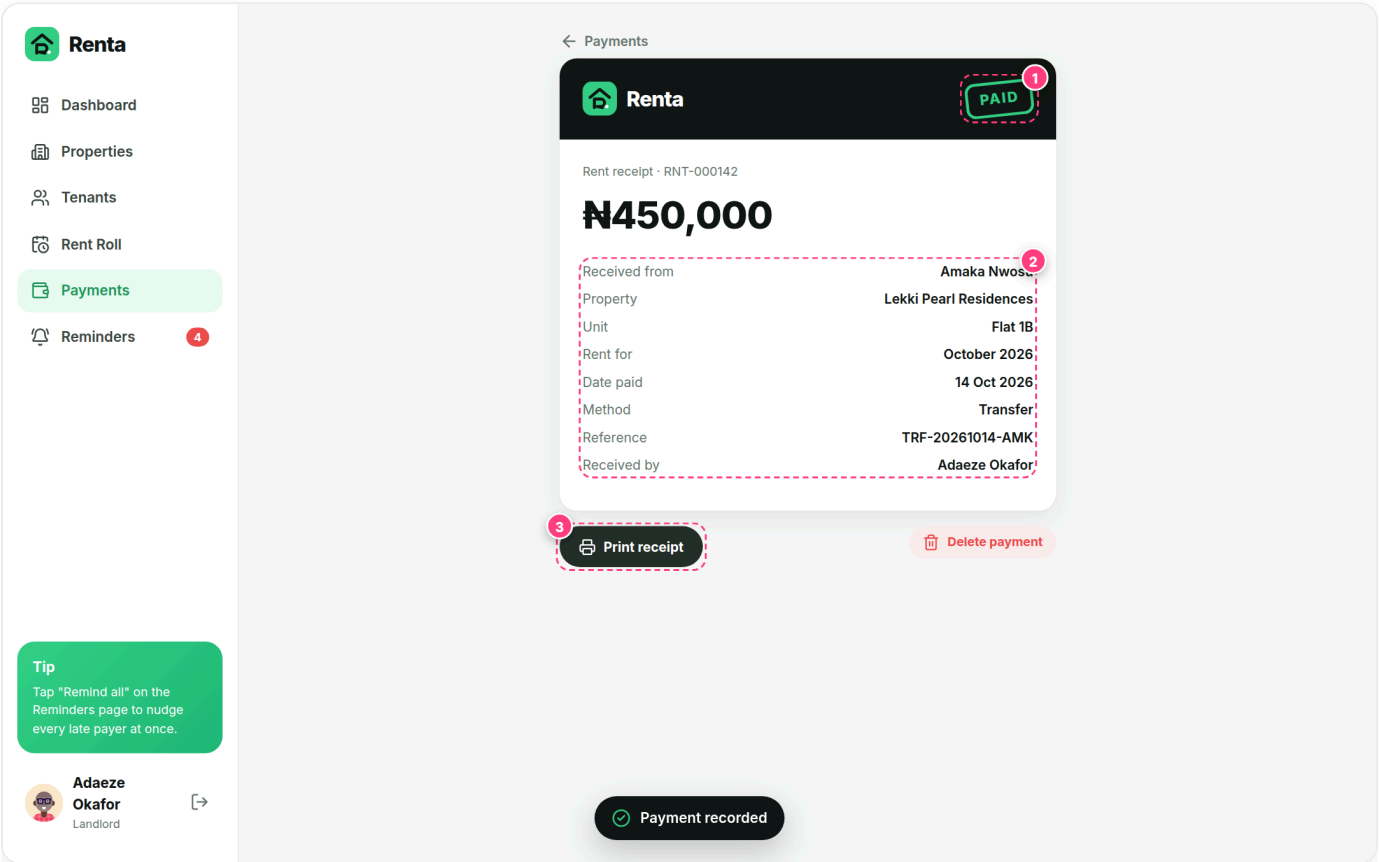

- 1** Tenant (pre-selected when you come from a profile or the rent roll).
- 2** Over-payment guard: you can't record more than the balance outstanding for that month.
- 3** Rent month this payment covers.
- 4** Method: bank transfer, POS, cash or card, plus an optional reference.

How to

- Pick the tenant and the rent month.
- Enter the amount and date paid.
- Click Record payment. A receipt opens straight away.

Receipt /payments/:id/receipt

Every payment gets a receipt with its own number (RNT-000123) that can be printed or saved as PDF.

- 1 PAID stamp and the amount.
- 2 Who paid, which unit, which month, and the method and reference.
- 3 Print receipt (navigation is hidden when printing).

Payments /payments

The full payment log for bookkeeping.

5

- 1

Remind all: sends a reminder to every overdue tenant at once.
- 2

How late, and how many months are unpaid.
- 3

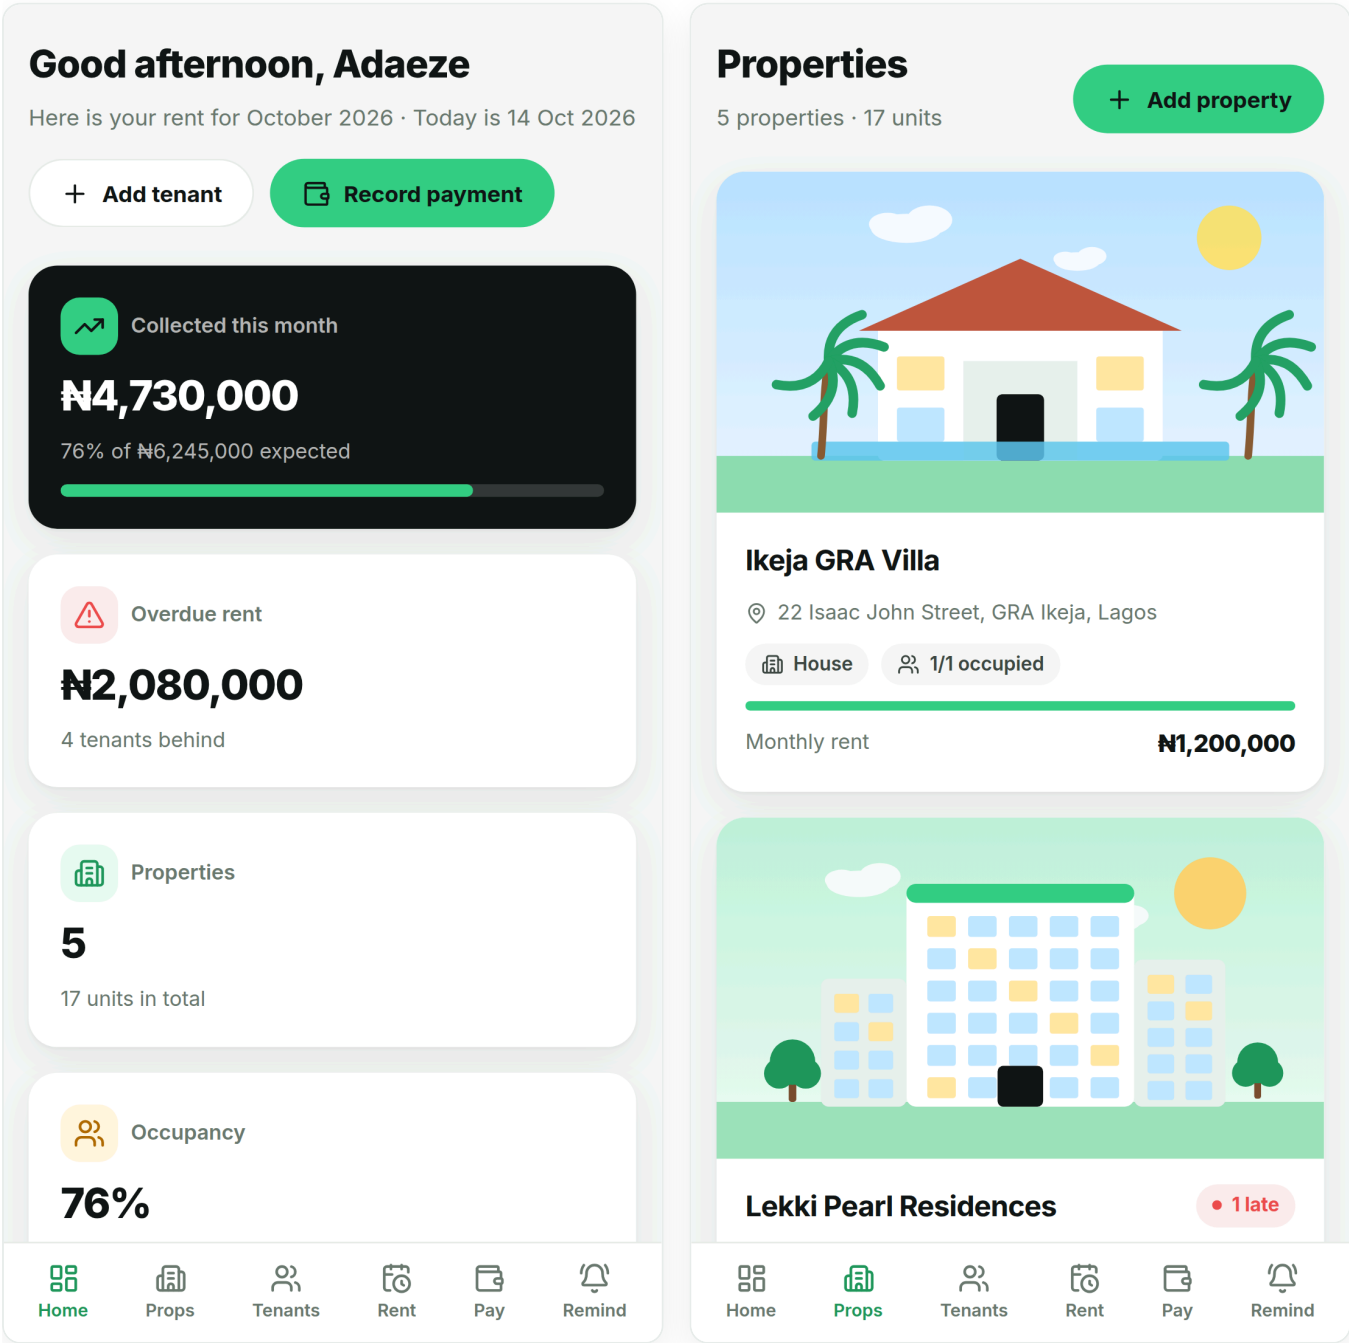

Message preview, written from the tenant's name, amount, month and days late.
- 4

Channel: WhatsApp, SMS or Email.
- 5

Sent history (each reminder is saved with its channel, amount and time).

Mobile

On phones the sidebar turns into a Bolt-style bottom tab bar, cards stack into one column and wide tables scroll sideways inside their card.

6 • Running locally

You need Node.js 20.9+ and PostgreSQL 14+. If you have Docker, `docker compose up -d` starts a matching database.

```
git clone https://github.com/emmanuelekopimo/renta && cd renta
npm install
cp .env.example .env          # DATABASE_URL, SESSION_SECRET
npm run db:setup              # run migrations and load demo data
npm run dev                   # http://localhost:3000
```

Demo account

Email `demo@renta.app` · Password `renta123`. The demo data has 5 properties, 13 tenants, ~130 payments and a mix of paid, part-paid, upcoming and overdue rent. It is dated relative to today, so the demo always looks current.

Useful scripts

COMMAND	WHAT IT DOES
<code>npm run dev</code> / <code>build</code> / <code>start</code>	Develop, build and serve the Next.js app
<code>npm run db:generate</code>	Generate a new SQL migration after editing the schema
<code>npm run db:migrate</code> · <code>db:seed</code>	Apply migrations · reset demo data (<code>-- --if-empty</code> only seeds an empty database)
<code>RENTA_TODAY=2026-10-14</code>	Optional: fix "today" to a date, for repeatable demos and tests
<code>npm run docs:screens</code> · <code>docs:pdf</code>	Retake the annotated screenshots · rebuild this PDF

7 • Testing

Unit • Vitest

27 tests: rent maths (month boundaries, clamped due days, statuses, ledger, arrears), formatting and Zod validation.

Integration • Vitest + Postgres

16 tests against a real `renta_test` database: CRUD, ownership checks, cascades, part-payments, over-payment guard, reminders, dashboard totals.

End-to-end • Playwright

13 browser tests: login, add property and tenant, record payment, rent-roll navigation, reminders, CSV/API auth, delete, sign out, mobile tab bar.

```
npm test          # unit + integration (needs renta_test database)
npm run test:e2e  # builds the app, then runs Playwright on desktop and mobile
```

Result at time of writing: **56 / 56 tests passing** (27 unit, 16 integration, 13 end-to-end).

8 • Deployment (Railway + PostgreSQL)

Renta deploys to the **school-projects** project on [Railway](#), with a managed PostgreSQL database alongside it. `railway.json` sets how it builds and starts:

- **Build:** `npm run build`
- **Start:** `npm run start:railway` : apply migrations → load demo data *only if the database is empty* → `next start`
- **Health check:** `/api/health` (also checks the database connection)

```
# one-time
npm i -g @railway/cli && railway login
# deploy (links project "school-projects", adds Postgres, sets variables, deploys)
./scripts/deploy-railway.sh
```

VARIABLE	VALUE
DATABASE_URL	<code>\${{Postgres.DATABASE_URL}}</code> (Railway fills this in from the Postgres service)
SESSION_SECRET	A long random string used to sign session cookies

9 • 5-minute presentation script

0:00 to 0:40 • Problem. "Landlords track rent in notebooks and WhatsApp, so they forget who paid and feel awkward chasing late tenants." Show the login page and sign in with the pre-filled demo account.

0:40 to 1:40 • Dashboard. Point out collected vs expected, total overdue, the 6-month chart, *Due soon* and the overdue list. Point to the red badge on Reminders.

1:40 to 2:20 • Properties & tenants. Open the property cards (occupancy, late badges), then Emeka Obi's profile: the coloured month strip shows September and October unpaid.

2:20 to 3:20 • Record a payment. On the Rent roll, click *Pay* for Amaka. Try ₦500,000 to show the over-payment check, then pay ₦450,000 and show the receipt. Back on the dashboard, she has left the overdue list.

3:20 to 4:10 • Reminders. Show the generated message, pick WhatsApp and send it, then click *Remind all*. The history updates straight away.

4:10 to 5:00 • Tech & quality. Next.js + TypeScript, Drizzle + PostgreSQL on Railway; the rent rules are pure functions; 56 automated tests. Close on the phone layout.
